

Special Feature

Low power consumption/high performance/high speed standard microcomputer

My first H8 microcomputer

Introduction Improved core performance and peripheral features

60 Evolving standard H8 microcomputer

1st part Basic section

Chapter 1 Software run on the hardware

62 How to make reliable H8 microcomputer boards

Chapter 2 Understand the behavior of CPU/memory

74 Capable of programming with understanding of internal behavior

Appendix 1 From low power consumption type to high speed type

85 Selection guide for H8 microcomputers and mounted boards

Chapter 3 ①I/O, ②A-D converter, ③Interrupt, ④Timer

90 How to use 4 necessary peripheral features

Chapter 4 Operation of conventional program and improvement of processing performance

100 Architecture of latest H8 microcomputer "SX"

Chapter 5 Understand the basic features for easy programming

108 Support a programming - Function of genuine development tool "HEW"

2ndpart Application section

Chapter 6 Fully utilize the limited hardware - High speed processing of various tasks

120 Optimization of code size and processing time by using the genuine tool "HEW"

Appendix 2 Delivery agents of H3664/3694 microcomputer boards

127 Where to obtain a compact and low-cost standard H8 microcomputer boards

Chapter 7 High-precision measurement by direct connection to microcomputer

128 The data logger using the H8SX with built-in amplifier and 16bit A-D converter

Appendix 3 H8/3048F with built-in flash memory available changed the destiny in 1996

141 Story of standard microcomputer H8

Chapter 8 For control of I/O and A-D through USB from PC

142 How to operate a USB communication module with built-in H8SX

Appendix 4 High-functional battery devices run smoothly over a long time

150 Low power consumption operation mode of latest H8 microcomputer

Power supply and countermeasure against noises

- 190** For accurate observation of high current at more than tens of amperes changed by ns
Mechanism and usage of current probe
-
- 197** Protect circuits from destruction by surge noise coming into power/communication cables
Type and usage of parts for countermeasure against lightning and static electricity
-
- 213** Apply the electric generation energy from solar panel to commercial power line
Mechanism and function of power conditioner for solar battery

New parts

- 156** Automatic generation of optimized control parameter with just one click
Digital control DC-DC converter IC "ZL2006"
-
- 165** Calculation process of parameter given to the digital control IC "ZL2006"
Process of development tool "CompGL" generating PID parameters
-
- 168** Capable of BTL connection and no need for external heat radiator and power transistor
Output at 20Wx2 in 8mm square - One chip class D amplifier "MAX9708"

Serialization

- 151** Natural energy use in eco-era <3>
Repel destructive animals by using a loudspeaker capable of recording/playback
-
- 176** Introduction to digital filter without mathematical formula <7>
Basic technology for oversampling "Interpolation"
-
- 208** CMOS analog circuit to the future <9>
Technology to adjust lowering gain of OP amplifier
-
- 220** Challenge to CMOS analog IC design <10>
Fabrication of component cell and allocation / wiring
-
- 228** Learn from one's mistakes <4>
Error generation with terminating resistance of differential transmission circuit
-
- 230** Checkmate circuit <5>
Monotonically reduce high-pass gain

- 231** Reader's Forum **232** Information **234** Next issue/Editorial voice
