

Special Feature

Key device for energy saving - MOSFET/Diode/IGBT

How to utilize the latest power devices in eco era

Prologue
62 Power devices will realize ecology !

Pictorial book
64 Performance improvement of power devices

1st section Power MOSFET

Chapter 1
72 Improvement on "on-resistance" and "switching speed" responsible for loss
 Characteristics and mechanism of latest power MOSFET

Chapter 2
76 Reliable switching of high voltage/high current at 75 - 1000V
 How to use mid-to-high voltage MOSFET

Chapter 3
84 Next-generation device with high speed switching/low on-resistance
 Mid-to-high voltage super junction type

Chapter 4
90 Most typical switching power supply as an example
 How to select mid-to-high voltage MOSFET

Chapter 5
98 Switch ON/OFF 16 - 250V DC voltage at high speed without loss
 How to use low voltage MOSFET

2nd section Rectification devices

Chapter 6
108 Ideal for DC power supply line ON/OFF and DC-DC converter
 Types and characteristics of power diodes

Chapter 7
116 From the circuit to operate 50/60Hz commercial power supply on DC to switching power supply
 Application of power diodes

3rd section IGBT

Chapter 8
120 Easy to drive like MOSFET and low on-voltage like a bipolar
 Types and characteristics of IGBT

Special feature for summer vacation

Fabrication of latest IC MUSES manufactured by New Japan Radio Co., Ltd.

Mini power amplifier using \$5 audio OP amplifiers

Chapter 1
130 Fabrication of headphone amplifiers

Chapter 2
138 Fabrication of 4W/7W power amplifiers

New parts

51 Pictures guide of discreet power semiconductors

165 ARM Cortex-M3 core microcomputer "Stellaris LM3S3748"

171 Easy ARM microcomputer development tool "mbed NXP LPC1768"

175 Common sense to utilize chip noise suppression components

188 Basic knowledge of LED for illumination
